

OLAT / LINK LIST

1. Overview

The course element **link list** can be used to quickly and easily create a collection of links for a course. No HTML knowledge is required for this.

2. Setting up the Course Element

The course element link list can be found in the editor view under **Insert course elements**.

The element is added to the course menu like any other element.

- If necessary, give the link list element a **title** and possibly a **description**.
- If this element is not subordinate to other elements, set a group-dependent filter in the **Visibility** OR **Access** tab.
- In the **Access** tab, you also determine who is allowed to edit the link list. In the default setting, this is blocked for learners.

3. Link list in the Course View

If the element is called up in the course, a link can be created via the button

+ New entry

- The desired name and the link target (URL) must be entered. The link target is not displayed in the course, only the specified link title.
- A short description or comment can be added to each link in the "Description" field. This description is displayed directly under the link title.

- In the link list, a link can be edited by clicking on the pencil icon.

- Links that are no longer needed can be removed via the recycle bin.
